

Interview Questions

- You're tasked with designing an API for a new product. What are your first steps in resource modeling and URI design?
- Describe a scenario where API versioning became necessary in a project you worked on, and how you implemented it.
- How do you approach API testing in your projects? What tools do you prefer?
- What are the trade-offs between REST, GraphQL, and gRPC? When would you choose one over the others?
- Explain how you would implement user authentication and authorization in a Spring Boot REST API using JWTs.
- How do you ensure your API is performant and scalable under heavy load?
- What steps would you take to harden an existing API against common security threats?
- Discuss your experience with API documentation. What makes good API documentation?
